

Menampilkan Data Graf

BFS (Breadth First Search)

DFS (Deep First Search)

BFS \rightarrow 1, 3, 4, 2, 5, 6

DFS

1 3 5 4 6 2

BFS \rightarrow Graph + Queue

(

)

1 2 3 4 5

Output 1 2 3 4 5

DFS

DFS → stack

Output 1 2 4 3 5

Procedure BFS (First: address besar)

kamus

B₁: address besar

B₂: address kecil

head: address enqueue

enqueue } udah ada
dequeue

Algoritma

B₁ ← First → Starting Point
March di Node
Anal
enqueue (B₂, head)

while (head ≠ Null)

Output (head.info.data)

head.info.status ← true

Box Besar

Data	Status	Address	Next
		address	

menuliskan isi Node

B₂ ← head.info.tetangga

while (B₂ ≠ Null)

if (B₂.data.status ≠ true)

enqueue (B₂, head)

B₂ ← B₂.next

menekan anak tetangga

Endwhile
 dequeue (head)
 endwhile

DFS

Graph

Stack

address Besar

Pop dan push (sudah Ada)

Procedure DFS (First: address besar)

Kamus

B_1 : address besar

B_2 : address kecil

Top: address stack

Algoritma

$B_1 \leftarrow \text{First}$

Do while ($B_1 \neq \text{Top}$)

} untuk starting point

while (top \neq Null)

Output (top.info.data)
top.info.status \leftarrow true

→ menampilkan
Data

~~B2 \leftarrow top.info.tetangga~~

while (B2 \neq Null)

if (B2.info.status \neq true)

Push (B2, top)

B2.info.status \leftarrow true

B2 \leftarrow B2.next

endwhile

Pop (head)

Endwhile

→ masuki
Anak
Tetangga

Materi UAS

Stack Queue \rightarrow Coding

Tree \rightarrow Coding

↳ Sebagian teori

Graph \rightarrow Sebagian Coding

Sebagian teori

→ pre order ?

Post ?

in order ?

BFS ?

DFS ?
